LABORATORY MICROBIOLOGY & ANTIMICROBIAL SUSCEPTIBILITY REPORT

Patient Name:	Divya Sharma	Specimen ID:	ACC-2026-00008
MRN:	MRN-2026-1009	Order ID:	ORD-MIC-1008
Patient ID:	PAT-0009	Specimen Type:	Urine
Age / Sex:	53 Y / Male	Collected Date/Time:	2026-08-11 02:00
Admitting Diagnosis:	Sepsis secondary to UTI	Received Date/Time:	2026-08-11 02:45
Report Status:	FINAL	Reported Date/Time:	2026-08-13 06:00

I. PRIMARY SPECIMEN EXAMINATION & CULTURE FINDINGS

Direct Smear / Microscopy:	Gram-positive cocci in pairs and short chains observed.
Culture Growth Result:	Significant Pure Growth: $> 10^5$ CFU/mL isolated on selective and non-selective media.
Isolated Organism:	<i>Enterococcus faecalis</i>
Resistance Classification:	SUSCEPTIBLE
Identification Methodology:	Automated Microbial Identification (VITEK 2 GN/GP & MALDI-TOF Mass Spectrometry)

II. ANTIMICROBIAL SUSCEPTIBILITY TESTING (AST) — CLSI M100 CRITERIA

Antimicrobial Agent	MIC / Value	Interpretation	CLSI Category
Ampicillin	≤ 2 ug/mL	Susceptible (S)	S
Penicillin G	≤ 4 ug/mL	Susceptible (S)	S
Vancomycin	2.0 ug/mL	Susceptible (S)	S
Linezolid	2.0 ug/mL	Susceptible (S)	S
Daptomycin	2.0 ug/mL	Susceptible (S)	S
High-Level Gentamicin Screen	Synergistic	Susceptible (S)	S
Nitrofurantoin	≤ 16 ug/mL	Susceptible (S)	S

III. INTERPRETATION & CLINICAL REMARKS

Interpretation: Isolated strain of *Enterococcus faecalis* exhibits standard wild-type susceptible antimicrobial profile. No high-level or extended-spectrum acquired resistance detected. Therapy should be directed based on documented clinical susceptibility and site of infection.

IV. LABORATORY AUTHORIZATION & AUTHENTICATION

Laboratory Report ID: LAB-0008	Testing Lab: Division of Clinical Microbiology	Status: FINAL
Medical Technologist: S. Nambiar, MSc (Med Micro) Reg #MLT-2021-884	Reviewing Pathologist: Dr. Arvind Deshmukh, MD (Path) Reg #MMC-2012-0498	Consultant Microbiologist: Dr. Ramesh Kulkarni, MD, DNB Verified: 2026-08-13 06:00
