LABORATORY MICROBIOLOGY & ANTIMICROBIAL SUSCEPTIBILITY REPORT

Patient Name:	Ananya Sharma	Specimen ID:	ACC-2026-00014
MRN:	MRN-2026-1015	Order ID:	ORD-MIC-1014
Patient ID:	PAT-0015	Specimen Type:	Urine
Age / Sex:	50 Y / Male	Collected Date/Time:	2026-08-03 22:00
Admitting Diagnosis:	Acute Appendicitis	Received Date/Time:	2026-08-03 22:45
Report Status:	FINAL	Reported Date/Time:	2026-08-06 02:00

I. PRIMARY SPECIMEN EXAMINATION & CULTURE FINDINGS

Direct Smear / Microscopy:	Gram-positive cocci in pairs and short chains observed.
Culture Growth Result:	Significant Pure Growth: > 10 ⁵ CFU/mL isolated on selective and non-selective media.
Isolated Organism:	<i>Enterococcus faecalis</i>
Resistance Classification:	SUSCEPTIBLE
Identification Methodology:	Automated Microbial Identification (VITEK 2 GN/GP & MALDI-TOF Mass Spectrometry)

II. ANTIMICROBIAL SUSCEPTIBILITY TESTING (AST) — CLSI M100 CRITERIA

Antimicrobial Agent	MIC / Value	Interpretation	CLSI Category
Ampicillin	<= 2 ug/mL	Susceptible (S)	S
Penicillin G	<= 4 ug/mL	Susceptible (S)	S
Vancomycin	2.0 ug/mL	Susceptible (S)	S
Linezolid	2.0 ug/mL	Susceptible (S)	S
Daptomycin	2.0 ug/mL	Susceptible (S)	S
High-Level Gentamicin Screen	Synergistic	Susceptible (S)	S
Nitrofurantoin	<= 16 ug/mL	Susceptible (S)	S

III. INTERPRETATION & CLINICAL REMARKS

Interpretation: Isolated strain of *Enterococcus faecalis* exhibits standard wild-type susceptible antimicrobial profile. No high-level or extended-spectrum acquired resistance detected. Therapy should be directed based on documented clinical susceptibility and site of infection.

IV. LABORATORY AUTHORIZATION & AUTHENTICATION

Laboratory Report ID: LAB-0014	Testing Lab: Division of Clinical Microbiology	Status: FINAL
Medical Technologist: S. Nambiar, MSc (Med Micro) Reg #MLT-2021-884	Reviewing Pathologist: Dr. Arvind Deshmukh, MD (Path) Reg #MMC-2012-0498	Consultant Microbiologist: Dr. Ramesh Kulkarni, MD, DNB Verified: 2026-08-06 02:00
