LABORATORY MICROBIOLOGY & ANTIMICROBIAL SUSCEPTIBILITY REPORT

Patient Name:	Gaurav Gupta	Specimen ID:	ACC-2026-00006
MRN:	MRN-2026-1007	Order ID:	ORD-MIC-1006
Patient ID:	PAT-0007	Specimen Type:	Wound Swab
Age / Sex:	39 Y / Male	Collected Date/Time:	2026-08-04 02:00
Admitting Diagnosis:	Cellulitis	Received Date/Time:	2026-08-04 02:45
Report Status:	FINAL	Reported Date/Time:	2026-08-06 06:00

I. PRIMARY SPECIMEN EXAMINATION & CULTURE FINDINGS

Direct Smear / Microscopy:	Gram-positive cocci in clusters observed (moderate to heavy).
Culture Growth Result:	Significant Pure Growth: > 10 ⁵ CFU/mL isolated on selective and non-selective media.
Isolated Organism:	<i>Staphylococcus aureus</i>
Resistance Classification:	SUSCEPTIBLE
Identification Methodology:	Automated Microbial Identification (VITEK 2 GN/GP & MALDI-TOF Mass Spectrometry)

II. ANTIMICROBIAL SUSCEPTIBILITY TESTING (AST) — CLSI M100 CRITERIA

Antimicrobial Agent	MIC / Value	Interpretation	CLSI Category
Penicillin G	>= 0.25 ug/mL	Resistant (R)	R
Oxacillin	<= 0.5 ug/mL	Susceptible (S)	S
Cefoxitin Screen	Negative	Susceptible (S)	S
Vancomycin	1.0 ug/mL	Susceptible (S)	S
Daptomycin	0.5 ug/mL	Susceptible (S)	S
Linezolid	1.5 ug/mL	Susceptible (S)	S
Clindamycin	<= 0.25 ug/mL	Susceptible (S)	S
Erythromycin	<= 0.5 ug/mL	Susceptible (S)	S
Levofloxacin	<= 0.5 ug/mL	Susceptible (S)	S

III. INTERPRETATION & CLINICAL REMARKS

Interpretation: Isolated strain of ***Staphylococcus aureus*** exhibits standard wild-type susceptible antimicrobial profile. No high-level or extended-spectrum acquired resistance detected. Therapy should be directed based on documented clinical susceptibility and site of infection.

IV. LABORATORY AUTHORIZATION & AUTHENTICATION

Laboratory Report ID: LAB-0006	Testing Lab: Division of Clinical Microbiology	Status: FINAL
Medical Technologist: S. Nambiar, MSc (Med Micro) Reg #MLT-2021-884	Reviewing Pathologist: Dr. Arvind Deshmukh, MD (Path) Reg #MMC-2012-0498	Consultant Microbiologist: Dr. Ramesh Kulkarni, MD, DNB Verified: 2026-08-06 06:00
