LABORATORY MICROBIOLOGY & ANTIMICROBIAL SUSCEPTIBILITY REPORT

Patient Name:	Ritu Chopra	Specimen ID:	ACC-2026-00016
MRN:	MRN-2026-1017	Order ID:	ORD-MIC-1016
Patient ID:	PAT-0017	Specimen Type:	Urine
Age / Sex:	64 Y / Male	Collected Date/Time:	2026-08-10 18:00
Admitting Diagnosis:	Decompensated Heart Failure	Received Date/Time:	2026-08-10 18:45
Report Status:	FINAL	Reported Date/Time:	2026-08-12 22:00

I. PRIMARY SPECIMEN EXAMINATION & CULTURE FINDINGS

Direct Smear / Microscopy:	Budding yeast cells and pseudohyphae observed. Few pus cells.
Culture Growth Result:	Significant Pure Growth: > 10 ⁵ CFU/mL isolated on selective and non-selective media.
Isolated Organism:	Candida albicans
Resistance Classification:	SUSCEPTIBLE
Identification Methodology:	Automated Microbial Identification (VITEK 2 GN/GP & MALDI-TOF Mass Spectrometry)

II. ANTIMICROBIAL SUSCEPTIBILITY TESTING (AST) — CLSI M100 CRITERIA

Antimicrobial Agent	MIC / Value	Interpretation	CLSI Category
Fluconazole	<= 0.5 ug/mL	Susceptible (S)	S
Voriconazole	<= 0.06 ug/mL	Susceptible (S)	S
Posaconazole	<= 0.06 ug/mL	Susceptible (S)	S
Caspofungin	<= 0.25 ug/mL	Susceptible (S)	S
Micafungin	<= 0.06 ug/mL	Susceptible (S)	S
Amphotericin B	0.50 ug/mL	Susceptible (S)	S

III. INTERPRETATION & CLINICAL REMARKS

Interpretation: Isolated strain of **Candida albicans** exhibits standard wild-type susceptible antimicrobial profile. No high-level or extended-spectrum acquired resistance detected. Therapy should be directed based on documented clinical susceptibility and site of infection.

IV. LABORATORY AUTHORIZATION & AUTHENTICATION

Laboratory Report ID: LAB-0016	Testing Lab: Division of Clinical Microbiology	Status: FINAL
Medical Technologist: S. Nambiar, MSc (Med Micro) Reg #MLT-2021-884	Reviewing Pathologist: Dr. Arvind Deshmukh, MD (Path) Reg #MMC-2012-0498	Consultant Microbiologist: Dr. Ramesh Kulkarni, MD, DNB Verified: 2026-08-12 22:00
